Professional Summary

MERN Stack Developer with 1+ year of experience building scalable web applications using **Node.js**, **Express.js**, **React.js**, and **MongoDB**. Strong expertise in backend logic, RESTful API design, and UPI payment integrations. Proven track record in developing financial platforms and enterprise applications.

Work Experience

Software Developer, TP Digital Technologies – Kolkata, WB Mar 2025 – Present

Project: Multi-Service Financial Transaction Platform (MERN Stack)

- Developing comprehensive financial services platform using MongoDB, Express.js, React.js, and Node.js
- Implementing secure UPI-based payment feature with real-time transaction processing and status tracking
- Building RESTful APIs for diverse services including mobile recharge, DTH, and other utility bill payments
- Designing intelligent API failover system with priority-based routing and automatic fallback mechanisms
- Creating admin-controlled API management dashboard with transaction monitoring and service configuration
- Implementing commission-based incentive system with tiered membership levels and dynamic rate calculations
- Developing dispute resolution workflow with automated and manual refund processing
- Secured backend using JWT auth with role-based permissions and Express.js middleware

Software Associate, AVITS Solutions – Kolkata, WB Jun 2020 – Jan 2021

Project 1: Mobile Tower Site Maintenance Tracker (Django Web Application)

- Developed a web platform for tracking mobile tower maintenance activities using Django framework
- Implemented robust data validation and serialization using Django serializers with custom validation logic
- Created automated PDF report generation system for maintenance schedules and work orders
- Migrated file storage architecture from EC2 local storage to AWS S3 for scalability and cost optimization

Project 2: PVC Pipe Quality Control System (Django Analytics Platform)

- Developed Django-based quality control application for manufacturing process optimization
- Implemented sensor data integration for real-time pipe weight classification against industry standards
- Built data analytics dashboard with charts and metrics for production quality insights and trend analysis
- Created automated classification algorithm for pipe quality grading based on weight tolerance parameters

Technical Skills

Programming Languages: JavaScript (ES6+), Python

Backend Technologies: Node.js, Express.js, RESTful API Design, Django, Django REST Framework

Frontend Technologies: React.js, React Router, Context API, Redux, HTML5, CSS3

Databases: MongoDB, MySQL

Developer Tools: Git, GitHub, Postman, AWS S3, Cloudinary

Security & Authentication: JWT, bcrypt, Role-based access control

Education

Master of Computer Applications (MCA), Meghnad Saha Institute of Technology 2017 – 2020

Bachelor of Computer Applications (BCA), Meghnad Saha Institute of Technology 2014 – 2017
